Subject: New Diagnostics Display A801273

Dear Valued Customer,

Saminco international is continuously developing our products to have the latest technology and bringing new features to the products.

For the past 12 months we have been busy developing a new diagnostics display to match our latest Inverter technology. This display will feature the latest technology including a built in Handheld programmer that could be used directly from the display through the touch screen or through WIFI. We will also continuously add improvements to the display with additional new features.

The new display is a 3.4" round display that fits perfectly inside the existing MSHA approved enclosure (PN: E9001-083) and utilizes the existing cable. This new display will have auto machine reignition meaning that you will only need to purchase 1 display that will be a direct replacement for every display currently being sold. As soon as you connect the display to a system it will detect the CAN address, load all inverter/chopper parameters and fully setup the display for the machine/System.

There will be two new part number explained below that will replace all existing part number.

Including MSHA approved enclosure.

The new Saminco display PN A801273 will be a single part number that will replace all below part numbers.

- A800115
- A800229
- A800348

Excluding MSHA approved enclosure.

Part Number A801275 will be a replacement number for the below part display part numbers, and this will exclude the MSHA approved enclosure.

- A800101-A
- A800101-D
- A800101-E (Q750, Q800, VF1-75, VFD3, JD400 MINER)

We recommend you reach out to your Sales representative for pricing and lead times on the new display before making any new purchased or recommended replacements.
